

A black and white photograph of three people (two men and one woman) sitting around a desk, looking at a laptop. The man on the left is smiling and pointing at the screen. The woman in the middle is looking at the screen. The woman on the right is wearing a hijab and resting her chin on her hand, looking at the screen. There is a coffee cup and a notebook on the desk.

Founder's Message

Khalid Khalifa

At Our-CS, I've seen many businesses struggle—not from lack of effort, but from lack of structure.

Too many rely on scattered processes, manual work, and disconnected tools that slow growth.

That's why we build systems that bring clarity, control, and operational stability.

In the end, strong businesses are built on structure, not effort alone.

**Great businesses don't grow by chance
They grow through systems, clarity, and control.**

Company Overview

OUR-CS DEVELOPS STRUCTURED DIGITAL SOLUTIONS FOR ORGANIZATIONS THAT NEED MORE THAN A BASIC WEBSITE.

WE BUILD BUSINESS SYSTEMS, INTERNAL PLATFORMS, WORKFLOW AUTOMATION TOOLS, AND CUSTOM WEB APPLICATIONS DESIGNED AROUND REAL OPERATIONAL NEEDS.

OUR WORK FOCUSES ON PRACTICAL SOFTWARE THAT IMPROVES CONTROL, REDUCES MANUAL WORK, ORGANIZES WORKFLOWS, AND SUPPORTS LONG-TERM OPERATIONAL GROWTH.

WORKING ACROSS POLAND, THE UAE, AND INTERNATIONAL MARKETS, OUR-CS PARTNERS WITH ORGANIZATIONS THAT NEED REAL OPERATIONAL SYSTEMS — NOT GENERIC SOLUTIONS.

WE WORK BEST WITH COMPANIES THAT NEED CLEARER DIGITAL STRUCTURE, STRONGER INTERNAL CONTROL, AND SOFTWARE BUILT AROUND

Core Services

Business Systems Development

Structured digital systems designed to support real operational workflows, records, approvals, and internal business processes.

Admin Panels & Dashboards

Custom administrative environments that improve control, visibility, and day-to-day operational management.

Custom Web Applications

Web-based solutions built around specific organizational needs, business logic, and operational requirements.

Workflow Automation

Systems that reduce manual work, improve process consistency, and help teams operate with greater clarity and efficiency.

Publishing & CMS Platforms

Custom publishing environments for structured content management, editorial control, and media-driven workflows.

Internal Platforms & Portals

Secure internal systems for departments, teams, and organizations that need controlled digital environments for ongoing work.

**Work-
flow-driven
Systems for
Control and
Growth**

Selected Projects

Safety Horizon Systemt

A custom internal platform developed for Safety Horizon ECI to manage the full operational lifecycle of halal certificate issuance. The system centralizes certificate processing, company and product records, eligibility handling, approval stages, and controlled document output within one structured digital workflow. It also supports automated preliminary issuance logic, helping administrators distinguish between complete applications ready for approval and incomplete cases that still require action.

Problem Solved

Eliminated fragmented manual certification handling by turning approvals, eligibility checks, and document generation into one controlled and reliable workflow.

Selected Projects

ABC News 24/7

A full digital publishing platform built to combine a public-facing news website with a structured internal editorial management system. The platform supports article creation, author and category control, media handling, advertising content, role-based permissions, and multi-section publishing through a connected editorial workflow. One of its strongest capabilities is intelligent content classification, allowing the system to analyze article title and content and place it in the most suitable section automatically when needed.

Problem Solved

Reduced manual section assignment and publishing friction by introducing structured editorial control with intelligent classification across multiple news categories.

Selected Projects

Al Bayan Editorial System

An internal editorial operations system developed for Dubai Media – Al Bayan to automate the first stage of the newsroom workflow. It supports editorial link intake, article data extraction, content-type identification, section assignment, duplicate detection, insertion-time recording, archiving, and editor activity tracking. On top of its workflow automation, the system provides performance analytics and visual reporting that help management measure productivity and compare editorial output across time periods.

Problem Solved

Replaced repetitive manual intake and weak editorial visibility with an automated, measurable workflow that improved both speed and performance monitoring.

Selected Projects

MBR Award Evaluation System

A custom internal evaluation platform developed for Dubai Sports Council to manage participant registration, eligibility review, scoring workflows, exclusion tracking, archive management, and administrative reporting within one connected system. The platform was designed to centralize participant and organization records, improve control over evaluation stages, and provide administrators with clearer operational visibility from the initial submission stage through long-term archive handling.

Problem Solved

Brought the full award evaluation lifecycle into one structured workflow, replacing fragmented records and manual follow-up with clearer control over eligibility, scoring, exclusions, and archive management.

Why Our-CS

We focus on solving operational problems, not building surface-level solutions.

Our systems are designed to support real day-to-day work, improve visibility across processes, reduce dependency on manual operations, and scale with the organization over time.

We believe software should do more than look good. It should organize work, improve control, and help teams operate with confidence and clarity.

That is why every solution we build is structured around practical use, operational logic, and long-term performance.

**We build software
that teams rely on
not software they
struggle to use.**

Working across Poland, the UAE, and international markets, Our-CS builds real operational systems — not generic solutions. Let's connect.
